

PaaS port

PaaSport - The first marketplace providing interoperable PaaS offering

Standardization of PaaSport Innovation - [DIN SPEC 91337](#)

Standardization is a process of developing technical standards that has been agreed by different parties such as companies, users, interest groups, standards organizations and governments. Standardization can help to maximize compatibility, interoperability, safety, repeatability and quality. In addition, standards help clarify product characteristics and promote cooperation among market participants. Standardization can serve as a catalyst for innovation, and helps bring solutions to the market. Standards define interfaces and compatibility requirements. Anyone who ignores standards runs the risk of falling behind the competition.

To respond quickly to the fast changing and competitive market, the [PaaSport Project](#) consortium has decided to take advantages brought on by the Standardization and proceed with standardizing [PaaSport results and innovation](#).

On the 19th of October, 2016, in the beautiful city of Thessaloniki, Greece, the PaaSport Project consortium met for the 3rd time with a representative from the [DIN \(Deutsches Institut für Normung\) - the German Institute for Standardization](#) to discuss the content of the DIN SPEC for PaaSport in order to quickly turn PaaSport research and innovation into a marketable product. DIN and PaaSport have been working together in an agile manner for the past few months to make it possible to develop, deliver, and make available to the market a specification for Application Management Interface for Cloud Platforms. This is the first IT innovation to be standardized and published by DIN at the international level. The standard and publishable materials will be provided in 2017 in English targeting international users. The package comes in two parts: 1. Normative and 2. Informative.

The Normative part is a written document of 24-30 pages (subject to the final format by DIN) and the Informative part is the downloadable zip file including standardized APIs.

The PaaSport consortium and the DIN are looking forward to release *DIN SPEC 91337 - Unified Application Management Interface for Cloud Application Platforms* in 2017.

PaaSport Marketplace has been developed in the scope of PaaSport FP7 project (Project Number 605193).

More Information

For any interest in the PaaSport Marketplace or its components, the installation process and the requirements, please contact us. For more information visit:
